

Infrastructure Construction

Macmahon is a recognised leader in the design, procurement, fabrication and construction of innovative materials handling solutions for the mining and construction sectors.

Macmahon provides a unique service to its surface and underground mining clients through its Engineering capabilities. Its Mechanical Services, Electrical Services and Engineering Fabrication operations can design, construct, operate and maintain projects on both greenfield and operating sites.

Macmahon has in-house capabilities in the following areas:

-) Design of mechanical and electrical services
-) Fabrication
-) Maintenance services
-) National and international procurement, including logistics and quality management
-) Project management
-) Effective project delivery

All construction works are well supported by the Macmahon Safety Management System, which has seen the Company's safety record remain at the forefront at the construction sector. Macmahon can provide complete support from safety administration, training and inductions, through to hands on guidance assessing the risk and safety of all tasks undertaken throughout the project execution phase.

Infrastructure Construction

continued

Past and Present Projects include:

AG Glencore International CSA Mine, NSW

Complete turnkey project including engineering design, fabrication, procurement, construction and management of the extension and upgrade of the CSA No.1 Shaft.

Rio Tinto's North Parkes Mine

Construction of overland conveyor and linking infrastructure.

Rio Tinto's (Argyle Diamonds Pty Ltd) Argyle Mine

Installation of temporary crusher, pump stations, ancillary infrastructure to support block cave development including vent doors, piping and valving.

Straits Resources Nifty Mine

Design and construction of drift conveyors and crusher installation.

BHP Billiton's Leinster Nickel Operations

Design and construction of underground crushing and materials handling infrastructure. Refurbishment and equipping of deepened shaft.

Newcrest's Ridgeway Mine

Construction of portal / overland conveyors.

Xstrata's Enterprise Mine

Design and construction of paste fill plant.

BHP Billiton Olympic Dam

Construction of the surface infrastructure for the Clark Shaft recovery project.
